ABSTRACT OF THE DISCLOSURE

A golf club head has a bottom face having a periphery formed with an arc-shaped face. The bottom face of the golf club head has a center formed with a receiving recess for receiving an elastic bushing. The receiving recess has a determined slope and has a width slightly greater than the diameter of the golf ball. Thus, the golf club head can be used to pick up the golf ball, so that the user can directly pick up the golf ball without needing to bow, thereby facilitating the user picking up the golf ball.
